

# Energy tower **EMS-ENERGY**

EMS-ENERGY 4 Master

EMS-ENERGY 4 Slave

# Energy tower EMS-ENERGY

## DESCRIPTION

The innovative energy tower EMS ENERGY provides a reliable power supply for motor homes and caravans on camping sites and RV parks. The use of stainless steel combined with a small footprint provide a modern and attractive design. Over and above that, the robust construction and the use of high quality components lead to a long product life, less service expenditure and very good weather resistance.

## OPERATION

The select buttons for the individual sockets are positioned directly below the display in economic height. The status LEDs above the buttons clearly indicate with red and green colours, which sockets are occupied or free.

After selecting a free socket and inserting a coin or paying by RFID-card, the available power amount is displayed in kWh and released. The EMS ENERGY convinces by an intuitive user guidance and easy handling during the whole sale process.

Cash reports and parameters (prices, amounts of energy,...) can be easily accessed and adjusted by the site owner after entering the local system modus at each tower.

## SUPPLY OF UP TO 8 SITES

The DIN VDE 0100-708 from 01.04.2012 prescribes that a maximum of 4 sockets are allowed per tower. Due to the optional combination of master and slave tower, up to 8 sockets (4 Slave, 4 Master) can be supplied with only one control unit. The selection and payment of all 8 sockets are centralized at the EMS-ENERGY master tower. The master-slave concept reduces acquisition costs and facilitates the local distribution of towers on the available site space.

## FEATURES

- Power sockets CEE, 16A, 230V
- Robust and weather resistant stainless steel housing
- Elegant design
- Intuitive operation
- Individual selection button and status LED per socket
- Large display for information, e.g. remaining energy, rates and parameters
- Encapsulated electronics
- Electronic coin selector 0,10 EUR to 2,- EUR and tokens
- Optional RFID interface for online and offline payment with Beckmann RFID cards
- Optional LED illumination of front and sockets for night operation
- Dimensions Master (HxWxD): 1300 x 260 x 275 mm  
 Dimensions Slave (HxWxD): 1017 x 100 x 100 mm

## ORDER INFORMATION

Article No.	Description
12000103	EMS-ENERGY 4
12000110	EMS-ENERGY 4+4 (Master + Slave)
